

## **PACKAGE LEAFLET: Information for the user**

### **FLENIDE**

Tablets – 50 mg, 100 mg

(Flecainide acetate)

**Read all of this leaflet carefully before you start taking this medicine.**

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.
- If any of the side effects gets serious, or if you notice any side effects not listed in this leaflet, please tell your doctor or pharmacist.

#### **In this leaflet:**

1. What Flenide is and what it is used for
2. Before you take Flenide
3. How to take Flenide
4. Possible side effects
5. How to store Flenide
6. Further information

### **1. WHAT FLENIDE IS AND WHAT IT IS USED FOR**

Flenide tablets contain the active substance flecainide acetate, which belongs to a group of medicines called anti-arrhythmics. Anti-arrhythmics work by controlling the rate and rhythm of the heart.

#### **Flenide is used to treat:**

- Arrhythmias (irregular heart beat)
- Tachycardia (heart beating too fast)
- Atrial fibrillation (rapid contractions of muscles in the heart).

It is important for your doctor to treat these conditions quickly and effectively in order to prevent more serious heart problems from developing. There are two strengths of tablet available, 50 mg and 100 mg.

## **2. BEFORE YOU TAKE FLENIDE**

### **Do not take Flenide tablets if you:**

- are allergic to flecainide acetate or any of the excipients of this medicine;
- have heart failure;
- have cardiogenic shock (your heart is unable to pump as much blood as your body needs)
- have heart block (your heart misses beats);
- have long-standing atrial fibrillation (rapid contractions of muscles in the heart);
- have or have ever had any heart problems, including problems with the valves in your heart or conduction problems;
- have sinus node dysfunction (a specific condition where your heart beats abnormally)
- have had a myocardial infarction (heart attack);
- have Brugada Syndrome, a genetic disease that causes severe disturbances of the rhythm of the heart and may lead to sudden death in apparently healthy individuals;
- are pregnant or breastfeeding.

If any of the above applies to you tell your doctor or pharmacist.

### **Before you take Flenide tablets your doctor may check:**

- your fluid levels are correct;
- your liver and kidney functions.

This is to check that Flenide tablets are right for you and to help the doctor calculate the dose you need.

### **Take special care with Flenide**

Ask your doctor or pharmacist before taking Flenide if you:

- have high blood pressure;

- have angina (chest pains);
- have heart disease;
- have kidney disease or kidney problems;
- have liver disease or liver problems;
- wear a pacemaker.

## **Children**

Flenide tablets are not recommended for children under 12 years of age.

## **Taking other medicines**

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines, including those obtained without a prescription, and in particular, any of the following:

- any other medicine used to treat heart arrhythmias or heart problems, such as cardiac glycosides, beta-blockers, verapamil, propranolol or amiodarone;
- medicines to treat high blood pressure;
- antidepressants (medicines used to treat depression) such as tricyclic antidepressants, fluoxetine, paroxetine or reboxetine;
- anticonvulsants (medicines used to prevent epileptic fits) such as phenytoin, phenobarbital or carbamazepine;
- antipsychotics (medicines to treat mental illness) such as clozapine;
- antihistamines (medicines to treat allergic reactions) such as mizolastine or terfenadine;
- quinine (medicine to treat malaria);
- medicines to treat HIV such as ritonavir, lopinavir or indinavir;
- diuretics (water tablets);
- cimetidine (medicine to treat stomach ulcers);
- bupropion (a medicine to help you stop smoking).

These medicines may interfere with your treatment.

### **Pregnancy and breastfeeding**

If you are pregnant or breastfeeding, think you may be pregnant or are planning to have a baby, ask your doctor or pharmacist for advice before taking this medicine.

### **Driving and using machines**

Do not drive or operate machinery if you feel dizzy or drowsy, or have eyesight problems while taking this medicine.

## **3. HOW TO TAKE FLENIDE**

Always take Flenide tablets exactly as your doctor or pharmacist has told you. Check with your doctor or pharmacist if you are not sure.

**Important: Your doctor will choose the dose that is right for your condition. Usually your treatment with Flenide tablets will be started in hospital.**

If you have switched from a different formulation (e.g. from an injection of Flecainide), your doctor should do so with caution and monitor you closely.

### **Adults**

Supraventricular arrhythmias (irregular heart beat that starts in the upper chambers of your heart):

- Flenide 50 mg tablets: The recommended dose is one tablet twice a day;
- Flenide 100 mg tablets: The recommended dose is half a tablet twice a day.

Your doctor may prescribe up to a total dose of 300 mg daily (3 x 100 mg tablets or 6 x 50 mg tablets).

Ventricular arrhythmias (irregular heart beat that starts in the lower chambers of your heart):

- Flenide 50 mg tablets: The recommended dose is two tablets twice a day;
- Flenide 100 mg tablets: The recommended dose is one tablet twice a day.

Your doctor may prescribe up to a total dose of 400 mg daily (4 x 100 mg tablets or 8 x 50 mg tablets).

### **The elderly and patients with kidney, or heart problems**

For elderly patients and patients with kidney, or heart problems, the doctor may tell you to take a lower dose. While you are taking this medicine, your doctor may ask you to have check-ups.

These are to make sure that your medicine is working properly and that the dose you are taking is right for you.

### **Children**

Flenide tablets are not recommended for children under 12 years of age; however, dairy products such as milk, infant formula and possibly yoghurt may reduce how much flecainide acetate is absorbed in children and infants.

### **If you take more Flenide than you should**

If you take more Flenide than you should, or if the children take it accidentally, immediately get to the nearest hospital casualty department.

### **If you forget to take Flenide**

If you forget taking one dose (or more), take the next dose in its usual time.

Do not take a double dose (or higher) to make up a forgotten dose (doses).

### **If you stop taking Flenide**

Do not stop taking Flenide tablets without first talking to your doctor.

If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

## **4. POSSIBLE SIDE EFFECTS**

Like all medicines Flenide tablets can cause side effects, although not everybody gets them.

Some side effects could be serious. If you of the side effects listed below appears to you, seek immediate medical help:
