### **1. WHAT IKTIOL IS AND WHAT IT IS USED FOR**

Iktioli contains ichthammol which has an antiseptic, antiparasitic and keratolytic action. It is for external dermatological use only. It is locally used in eczematous dermatitis, especially in chronic eczema when there is a deep desquamation, in psoriasis and erysipelas. Due to its anti-inflammatory and antiseptic properties and the stimulation of blood circulation, Iktioli improves the symptoms of inflammation. In cases with purulent problems in advanced stages of inflammation, it softens the infection hearth and drows out the infection by pulling the pus to the

surface. Iktioli is suitable for most cases but may not be preferable because of its visibility and unpleasant odour or since it is not recommended to be applied on face.

## **2. WHAT YOU NEED TO KNOW BEFORE YOU USE IKTIOL**

### **Do not use Iktioli:**

- if you are allergic to ichthammol or to any of the other ingredients of the ointment.

### **Warnings and precautions**

For dermatological use only. Do not use in mucosa, eyes, nostrils.

### **Other medicines and Iktioli**

Tell your doctor or pharmacist if you are taking / using, have recently taken / used or might take / use any other medicines. Inform your doctor that you are using Iktioli if you take / use any other medicine during treatment. However, the clinical experience has not identified any interaction between Iktioli and other medicines as a result of their simultaneously local or systemic administration.

### **Pregnancy and breastfeeding**

**Ask for the advice of the doctor or pharmacist before using this medicinal product.**

There are no adequate studies for the possible effects of Iktioli in pregnancy and breastfeeding.

### **Driving and using machines**

The effect of this medicine on the ability to drive and use machines is not harmful.

## **3. HOW TO USE IKTIOL**

Always use Iktioli exactly as your doctor or pharmacist has told you. Check with your doctor or pharmacist if you are not sure. If you feel that the effect is too strong or too weak, talk to your doctor or pharmacist.

For the treatment of chronic eczema forms described above, is recommended the application of a sufficient quantity of ointment to cover the affected area of skin, 1-3 times daily. The applied

dose is dependent on the total surface of the affected skin. Your doctor will decide if the dose should be increased or decreased.

The therapy should start as soon as possible when the first symptoms appear.

### **If you use more Iktioli than you should**

If you use more Iktioli than you should, or if your child has used it by mistake, contact your doctor or call the hospital so you will be advised for the possible risk and the actions to take.

Overdose cases are not known because the skin absorption is minimal.

### **If you forget to use Iktioli**

If you forget to use a dose (or more), use the next dose at the normal time.

Do not use a double dose (or higher) to substitute the forgotten dose/s.

If you have any further questions, ask your doctor or pharmacist.

## **4. POSSIBLE SIDE EFFECTS**

Like all medicines, this medicine can cause side effects, although not everybody gets them. Most of the effects are dose-dependent and disappear when the dose is reduced or the treatment is interrupted. Some of them may appear at the beginning and disappear spontaneously during treatment.

The undesirable effects are:

- irritations
- hypersensitivity skin reactions.

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet.
